- Reactive and proactive security responses
- Identify potential threat actors
- Create a security strategy
- Safety protocols
- Active shooter training for staff
- Emergency action and evacuation plans
- Security and regulatory compliance

Take the time to ask yourself critical questions to determine what you need to **protect your people.**

If you haven't done a risk assessment for your amusement park, you're putting your staff and guests at risk. A comprehensive security plan can prevent the unthinkable from striking your park and help keep everyone safe.

A threat actor only needs to find one entry point, one weak link. Don't give it to them—develop and implement your plan.

It's far better to be proactive and identify potential threats *before* shots are fired, to lock down the premises, and give law enforcement critical situational awareness—like geolocation and accurate perpetrator descriptions—to handle the threat as quickly as possible.

As elite technologists and former Navy SEALs, we use our hands-on combat experience to give you and your security personnel the military-level technology you need to win the war against gun violence in amusement parks.

Our visual gun-detection video analytics technology integrates with your existing digital cameras to detect brandished firearms and alert authorities and administrators... often within 3–5 seconds.

We also provide real-time tracking of threat actors, giving police and security the intel they need to find their target quickly.
