

WEAPON DETECTION WITHOUT BIAS

Working Together to Combat Gun Violence and Mass Shootings

A bi-partisan approach using AI-powered, unbiased detections.

Benefits of AI Gun Detection

No Infringement of Rights.

ZeroEyes does not target legal gun owners, just those who brandish a gun illegally. Detecting brandished firearms where they are not allowed—in public schools, private schools, offices, parks, event venues and more is ZeroEyes' focus.

No Bias.

ZeroEyes does not detect faces, behavior, clothing style, skin color, or anything other than brandished weapons. ZeroEyes is exclusively looking for one object: a brandished firearm.

No Red Flag Law or Data Repository.

ZeroEyes brandished firearm detections are not part of a database that tracks individuals. Detection images are not made public—only specified personnel and law enforcement receive dispatched detections for situational awareness purposes.

Detect. Verify. Alert.

ZeroEyes doesn't take sides when it comes to combating mass shootings either. Founded by Navy SEALs and Department of Homeland Security SAFETY Act designation recipients—we're only about detecting brandished firearms.
